ANNUAL MONITORING REPORT- OAKDALE IRRIGATION DISTRICT

Staff of the Central Valley Regional Water Quality Control Board (Regional Water Board) reviewed the Annual Monitoring Report (AMR) for the Oakdale Irrigation District (District) dated 28 February and received 29 February 2008. The District submitted this AMR to meet the conditions of the Monitoring and Reporting Program (MRP) Order No. R5-2003-0827 for Individual Dischargers under Amended Order No. R5-2006-0054. A copy of the AMR review memorandum is attached to this letter.

Included in the memorandum is information about elements of the AMR, which are required, but either did not occur or were not reported. These are as follows:

- (1) Absence of two out of the five field blanks that are required by Section 3.1.4 in Attachment A of the MRP;
- (2) Absence of field duplicates from all five monitoring events required by Section 3.1.4 in Attachment A of the MRP;
- (3) Omission of monitoring results for 2,4-dichlorophenoxyacetic acid from the 7 December storm event required by Section I.2 of the MRP;
- (4) Omission of analytical results from the Sweet Lateral monitoring site, which should have been collected during the 7 December storm event. Section I.5 of the MRP requires storm event monitoring at all sites.

For these reasons, the District is in violation of the MRP and the associated Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands. Failure to conduct and submit the four items listed above in next year's AMR will subject the District to further enforcement action, including possible administrative fines.

If you have any questions or comments regarding the review, or need any further information, please contact Chris Jimmerson at (916) 464-4859.
